

Angel Suero

Email-Derived Timeline

A chronology built from the reviewed Gmail archive, focused on identity formation, educational mobility, and institutional support structures.

Scope and caution

- This timeline tracks what appears in the reviewed email archive. It is not a complete biography and should not be treated as one.
- Early account history is partly shared-family history. The name layer begins as Ben Lopez / family-linked before the archive becomes clearly centered on Angel.
- One email from November 6, 2014 says “Angel Suero / March 14 2000.” That conflicts with later wording shared in chat, so the birth year remains unresolved inside this email-only record.
- A later email refers to taking classes “just like I would at Science,” but the exact school name is not fully confirmed by a clean welcome / enrollment email in the reviewed material.

Format: each entry gives the date, what happened, and the specific email thread or sender that anchors the event in the archive.

Open items still unresolved inside the archive

- Exact birth year: one archived email says March 14, 2000; other later wording outside the email archive says 2002.
- Exact high-school name: a 2016 self-description says “classes just like I would at Science,” but no single clean enrollment email was located in the reviewed pass.
- Final outcomes for every school application are not all visible. Marist reaches a decision / accepted-student stage in the archive, but the final enrollment path is not fully spelled out there.
- Because early account use is shared-family use, some early identity labels (Ben Lopez, SuperAsskicker01, percy012) should be treated as account-history markers rather than as simple one-to-one identity claims.
